1. Demographic Indicators

Demographic characteristics of a country provide an overview of its population size, composition territorial distribution, changes therein and the components of changes such as nativity, mortality, and social mobility. This section on demographic indicators has been subdivided into two parts- population Statistics and Vital Statistics. Population statistics include indicators that measure the population size, sex ratio, density and dependency ratio while vital statistics include indicators such as birth rate, death rate, and natural growth rate, life expectancy at birth, mortality and fertility rates. These indicators for the country as well as states will help in identifying areas that need policy and programmed interventions, setting near and far-term goals, and deciding priorities, besides understanding them in an integrated structure. Data in this section has been taken mainly from the “Census of India”.

- ▶ India’s population, as on 1 March 2011 stood at 12101.9 lakhs (6237 lakhs males and 5864 lakhs females). India accounts for a meagre 2.4 per cent of the total world surface area of 1357.9 lakhs sq km.

- ▶ The country has a low sex ratio of 940 female per thousand male, which has shown slight improvement during the last decade.

- ▶ The population density of India in 2011 is 382 per sq km while urban population is 31.60 % of the total population. Urban migration over the last decade has resulted in the rapid growth of urban slums.

- ▶ Age distribution of the population shows 31.4% in 0-14 age group while only 7.4% are in 60+ age group.

- ▶ The Estimated birth rate declined from 25.8 in 2000 to 22.1 in 2010, while the death rate declined from 8.5 to 7.2 per 1000 population over the same period. The natural growth rate declined from 17.3 in 2000 to 14.9 in 2010 as per the latest available information.
- ▶ The population, however, continues to grow, as the decline in the birth rate is not as rapid as the decline in the death rate

Source: Report on Medically Certified Cause of Death for the Year 2006, Office of Registrar General of India

It is hereby stated that the Report is based on Medically Certified Deaths occurring in hospitals (whether public or private) covered under the Scheme of MCCD run by Office of RGI. As only selected hospitals, and that too mostly from urban areas, are covered at present under the scheme of MCCD, the profile presented here may not yield the reliable pattern of cause specific mortality prevalent in the States/ Country in the strict sense of the term. However, it gives a valuable insight into the broad pattern of Cause-specific Mortality in the country. Keeping this in view, the data- users may take due caution while deducing the mortality pattern.
